

# Philmac The connection you can trust.

# **Pipe Repair Kit**

## **Technical Specifications Sheet**

Philmac Pipe Repair Kits are designed to enable fast and simple pipe repair to Metric and Rural systems. The range is based on the successful 3G Metric and Rural fittings platforms and is provided in a handy package that includes a length of straight pipe, specialised Philmac fittings and step by step easy to follow installation instructions.

#### **Easy to Install**

A special rubber sealing ring fits easily into the body of the saddle and provides high tolerance to variations in pipe size or out-of-round pipe.

#### **Rural Inserts**

Rural insert bores are dimensionally differently for the 1", 1-1/4" and 1-1/2" sizes, it is recommended these are not used as standard rural inserts but remain integral to the repair kits.

#### **Australian Made**

Manufactured in Australia for Australian conditions.

#### **Features and Benefits**

#### **Operating Pressure**

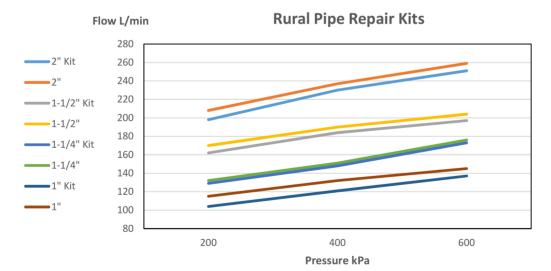

The metric range comprises two slip couplings rated for use in pressure systems up to 1600kPa; the pipe sample is blue line PE100 SDR11. The rural range comprises of two reducing couplings with the pipe sample being black PE100 SDR13.6.

#### **Flow Performance**

There is no impact to flow performance with the metric kit. A minor flow loss of no more than 4% may result when the rural kit is installed. This reduction is based on flow through a 10m length of nominal rural pipe – refer to chart above.

#### **Quality Materials**

All components are manufactured from quality materials as per the parent range of products.

Flow based on 10 m straight length of nominal pipe versus repair kit included in the system
